Final Office Action dated 3/3/2000  
Watanabe U.S. Patent 6,155,713

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Ohlson (5,764,724). Ohlson discloses a solid state detector (column 8, lines 18-26) and a holding mechanism configured to hold the detector such that it is horizontally movable (X direction in figure 12), pivotable on a vertical axis (11 in figures 8 and 9), pivotable on a horizontal axis which crosses the vertical axis (positions "E" and "F" in figure 2), and rotatable about an axis which crosses the horizontal axis and is parallel to a detecting plane of the detector (25 in figure 16). While the X-ray source is not explicitly shown, such a source is inherently a part of the system of Ohlson as the detector would be worthless without a source.

***Allowable Subject Matter***

3. Claims 2, and 4-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art teaches or suggests employing a detector support similar

to that disclosed by Ohlson where the detector can be employed with a below-table and above-table ~~source~~ arrangement, a ceiling mount, or coordinated control of the source and detector. While individually these elements are well known, there is nothing in Ohlson to suggest modifying the support of Ohlson to accommodate these modifications.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gaiser et al. disclose a digital imaging device positionable in any configuration required, but fails to disclose a solid state detector overcoming the shortcomings of Ohlson.

#### **Conclusion**

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
